Steel Drum Console

Curved ivory barrel ends / open warm-wood shelves / rounded top

2 CURVED STEEL ENDS

2 OPEN SHELVES

1 ROUNDED WOOD TOP

THE DESIGN

Two opposing upright half-drum shells with ribbed curved faces outward. Two narrower shelves between the ends; one separate, wider softly rounded top. Open front and clear floor-level gap.

ILLUSTRATIVE MODEL ENVELOPE

1060 mm width

850 mm height

420 mm top depth

680 mm example clear shelf span

All sizes are concept values, not measurements of the filmed piece.

PLANNING A NEW VERSION

01 **SOURCE SAFE METAL**
Use clean new stock or professionally prepared half-shells; check coatings.

02 **MEASURE THE REAL PARTS**
Set column spacing; measure shelf spans and depths at both levels.

03 **DESIGN CONNECTIONS**
Specify genuine shelf supports, top retention, and load path.

04 **PREPARE & FINISH**
Deburr edges, protect floor contact and choose compatible coatings.

BEFORE BUILDING / IMPORTANT

Do not cut or weld a drum of unknown history. Verify every connection, intended load and tip resistance with a qualified fabricator.
